SX1276 RF Part:
RFO_LF: +14dBm @ target 433MHz
RF Switch LF:
PA_BOOST: +20dBm @ target 915MHz
RF Switch HF:
Test Pads
100Ohm Resistors:
Interface:
Power Input:
Pullup/Pulldowns:
Power Select:
Design Notes
* PA_BOOST (Power Amplifier Boost) is configured for the high frequencie(HF) side. This provieds the +20dBm to the HF side. So, we do not use RFO_HF.
* The LF side can only do +14dBm with the RFO_LF
* Saw filter U4 should be 16MHz wide and centered at 915MHz
* Saw filter U6 should be centered at 433MHz
* When RF Switch CTRL is high RF1 is selected
RF Switch Configuration:
* The given resistor configuration is for linked control of both RF switched through RF_CTRL1. This is to mimic the controls of the Semtech mbed board. RF_CTRL2 is connected to the SX's RXTX_RF to get feedback from the SX. When RF_CTRL1 is high, both are in TX mode.
